

# EUROMOD Stata connector v0.1.0

## What's new?

Compared to previous release this version includes the following updates/changes:

- More functionalities in `euromod_getinfo` command:
  - The command now allows you to retrieve more information of the xml. Making it easier to run for example the best match for a given system or getting more general information on a system.

```
. euromod_getinfo, model("$model_path") country("BG")    system("BG_2023")  
  
. return list  
  
macros:  
    r(sys_year) : "2023"  
    r(sys_private) : "no"  
    r(sys_order) : "22"  
    r(sys_name) : "BG_2023"  
    r(sys_id) : "331ad06f-4424-4c8a-85c3-7d0019238991"  
    r(sys_headDefInc) : "ils_origy"  
    r(sys_datasets) : "training_data BG_2010_x1 BG_2020_c1 BG_2015_x2 BG_2021_c1 BG_2023_hhot"  
    r(sys_currencyParam) : "national"  
    r(sys_currencyOutput) : "national"  
    r(sys_bestMatchData  
sets) : "BG_2021_c1 "
```

- You can retrieve information on the Model level, country level and system level. Be aware that soon you will also be able to retrieve information on policies, datasets, etc.
- The information is stored in the return list `r()`
- For `euromod_run` and `euromod_getdata`:
  - Information of a simulation is now also stored in the return list
- Bug fix for data not being returned in rare cases for `euromod_run`
