

# EUROMOD Stata connector v1.0.0

## *What's new?*

Compared to previous version v1.0.0, this version includes the following updates/changes:

### ▪ **New Features**

- Automatic reloading of the model, when the country xml has been changed.
- Information of the dataset and values of the switches can now be retrieved via the *euromod getinfo* command.
- Connector will now also run with consumption taxes (CT) add-ons, by allowing for the possibility to transfer the data of the last run to the new run by using the 'keep' keyword.

### ▪ **Changes**

- The *euromod\_run*, *euromod\_getinfo*, *euromod\_setinfo* and *euromod\_getdata* are now superseded by a general *euromod* command that takes as a second argument *run*, *getinfo*, *setinfo* or *getdata*. The old syntax is however still supported.
  - E.g. *euromod\_run* becomes *euromod run*
- Documentation has been improved and updated
- The possibility of using an external logger has been disabled, because of the possibility of Stata crashing when closing it. Error messages produced by the simulation (if any) are however always printed.

### ▪ **Bug Fixes**

- Bug with respect to the inclusion of queries has been solved by the new release.
- When EM3Translation is not present in the EUROMOD project folder, the Connector will now translate the model automatically.
- Other small bug fixes.
