

# EUROMOD software v3.7.10

## *What's new?*

Compared to previous release v.3.7.8, this software version includes the following updates/changes:

### ▪ **Core software:**

- Fixed the "n/a" bug in switches
- Added \$exchangeRate in the intellisense and made sure that the constant is always created
- Fixed a bug with private components in Add-ons
- Fixed an issue with DefInput & CallProgramme when the model exists on a network folder
- Removed the "toggle" option from policy/function switches
- Improved the loading speed of all countries
- Fixed a bug in the Merge tool related to empty cells
- Copy/pasting empty strings in cells that do not allow it, will now paste the default values instead
- Blocked Extensions for the ao\_control\* policy of Add-ons (as this is run before extensions are even considered)

### ▪ **Applications:**

- **EUROMOD Statistics:**
  - Ensured that the filenames in statistics, macrovalidation etc are in alphabetical order
  - The tabs in the variable template now show the filename instead of the system
  - Improved output filename matching with systems if non-standard filenames are used (for In-depth & Macrovalidation)
  - Improved statistical templates
- **HHoT:**
  - Merged the latest HHoT files (v1.3.1)
- **Macrovalidation:**
  - Fixed a bug which confused macrovalidation when all output files were from the same system

### ▪ **Connectors:**

- Introduced a new functionality for EUROLAB
- Fixed a replacement bug in the Stata Connector
- Improved error handling of Stata Connector
