

# EUROMOD software v3.8.0

## *What's new?*

Compared to previous release v.3.7.10, this software version includes the following updates/changes:

- **Core software:**

- Redesigned the way constants work:
  - Fixed several bugs relating to the use of constants, including those that affected UKMOD
  - Introduced the concept of Literal Constants, whose value can be calculated at read-time
- Fixed a bug in Updating that affected models where variables were updated with the default factor
- Fixed a bug for TU Heads having (almost) the same income or age
- The executable now works with XML files not having CDATA (to support the new UI)

- **Applications:**

- **EUROMOD Statistics:**
  - Added the new Statistical Templates with updated texts/vars
  - Added a new General Settings form in In-depth and allowed the user to set a custom equivalence scale
  - Allowed for poverty lines based on a variable in In-depth

- **Connectors:**

- Improved syntax checking when using the extensions or Add-ons options in the Stata connector
