

# EUROMOD software v3.8.5

## *What's new?*

Compared to previous release v.3.8.3, this software version includes the following updates/changes:

- **Core software:**

- Fixed a bug in DefOutput related to TU\_info
- Fixed a bug in Macrovalidation with SILC values
- Fixed a bug with mean dispy in Macrovalidation table 3.7
- Added the ForceNonMonetary parameter in IlArithOp
- Updated the help file & fixed broken links
- CT table now does not delete or empty rows/cells that are not visible

- **Applications:**

- Updated the HHoT files
- Minor aesthetic improvements in the Statistics Presenter
- Fixed a crash bug in IncomeListComponents

- **Connectors:**

- Upon installing the latest version of the EUROMOD do-files, it is now possible to manually stop a simulation at a specified function using the option `breakfun_id`. EUROMOD will then return all output data that is generated up to that point. This functionality is useful for debugging purposes.
