EURO**MOD** I5.0+
What's new?

Compared to the previous stable release (I4.0+), this one includes the following updates/changes:

POLICIES AND FUNTIONALITIES

- **New policy systems:** 2022 [updated in relation to I4.109+].

- **New uprating indices** up to 2022 [updated in relation to I4.109+].

- **Bug fixes and improvements** in all country models.

- **Full compatibility with UKMOD**: inclusion of UK-specific variables in the variable list, exchange rates and harmonised price indices for the UK included in the corresponding tables.

- **MAX/MIN/ABS functions recoded to Excel-like syntax for all countries,** e.g. MAX(A,B) instead of A<MAX>B.

- **Datasets correctly sorted in all relevant tables.**

DATA

- **New EUROMOD input data for 2020** (income reference year: 2019). Available for 26 countries (all except LU) [four additional ones in relation to I4.109+].

- **Updated DRD codebook** with all the variable names and definitions in the latest datasets for all countries.

ADD-ONS

- **Add-ons** updated to work with 2022 systems.

- **Bug fix in the Marginal Tax Rates (MTR) add-on** regarding the initialisation of variables within loops.

SOFTWARE

Model I5.0+ is released together with a **new software version (3.5.8)**, which includes the following features in relation to the previous version publicly released (3.5.5):

- **Core software:**
  - Help file updated.
  - IlArithOp modified so that the generated variables are writable.
  - Uprating by regular expression modified to also match non-monetary variables.
  - Store function modified to support VarGroup and ILGroup parameters.

- **Plugins:**

  - **Hypothetical Household Tool (HHoT):**
    - New HHoT files (v1.2.11).
    - Several bug fixes and improvements.
