EURO**MOD** I5.41+ beta
What's new?

Compared to the previous stable release (I5.0+), this one includes the following updates/changes:

POLICIES AND FUNTIONALITIES

- **Improved uprating indices** for all years
- **Bug fixes and improvements** in all country models

SOFTWARE

Model I5.41+ is released together with a **new software version (v3.6.2)**, which includes the following features in relation to the previous version publicly released (v3.5.8):

- **Core software**
  - Added a new table for External Statistics, which is used by the new Macrovalidation tool (see next section)
  - Fixed a bug in the Uprating Indices form where columns without any values were ignored
  - Added the possibility of conditional uprating by regular expressions
  - Improved the help file

- **Applications**
  - **New Macrovalidation tool** to compare EUROMOD results with external statistics and SILC variables
  - **Hypothetical Household Tool (HHoT)**
    - Updated HHoT files
    - Fixed a bug related to derived variables using other variables that contained numbers in their name
  - **EUROMOD Statistics**
    - Unified the Statistics Presenter and the In-depth Analysis tools under a single button (EUROMOD Statistics)
    - Reorganised the Statistics Presenter templates to have tables grouped in a similar manner to In-depth Analysis
    - Added multiple breakdowns to both Statistics Presenter templates and In-depth Analysis
    - Allowed for file filtering when selecting the files for Statistics Presenter and In-depth Analysis
    - Improved the Excel export of all statistics (added support for borders, bold, auto-column-width etc.)
    - Updated the UKMOD templates

IMPORTANT NOTE: if you are using custom templates in the Statistics Presenter, please note that the location for them has moved:

- from c:\ProgramData\EUROMOD\Plugins\StatisticsPresenter\UserSelectableTemplates\
- to c:\ProgramData\EUROMOD\UserSelectableTemplates\
