

EUROMOD software v3.4.10

What's new?

Compared to previous release v.3.4.7, this software version includes the following updates/changes:

▪ **Core software:**

- Changes so that the version control tool allows uploading the DRD_training_data.xls and DRD_sl_demo_v4.xls files.
- Minor change performed so that the config files (ExchangeRates, Extensions and HICP) are only transformed once if they have not changed. And up2Date file is created.
- Speed improvement in DoesFormulaContainComponent
- Minor changes to UI and Libraries.
- Added a parameter in Totals to avoid a warning for duplicate definitions
- Added a parameter in IIArithOp to force generating monetary variables
- Improved BackEnd error handling
- Added a helping function to return the current URI folder
- Allow CalculateArithmetic to access data variables (using the values of the first individual in the dataset only).
- Added ReformTaxPretty method for ITT systems in reforms
- TaxPretty & ReformTaxPretty now check the filename and not the system name"
- Added help for the new "ForceMonetaryOutput" parameter in IIArithOp
- added help for the new "WarnIfDuplicateDefinition" parameter in Totals

▪ **Plugins:**

- **Hypothetical Household Tool (HHoT)**
 - New button to reset all advanced variables from the selected households included.
 - Added the possibility to insert the path to open a new project.
 - Fixed bugs
- **In-depth Analysis:**
 - Added button which allows resetting "EUROMOD project folder", and "merged dataset path", to the path of the project which is currently opened in EUROMOD.
 - The format of the excel file that can be downloaded from the results area has been improved.
 - The message that appears when the user clicks on Run without selecting any table or "save merged dataset at" has been improved.
- **Statistics Presenter**
 - Improvements in the feature export to Excel
